

Neuroanatomical Acupuncture

Integrative Health offers scientific approach to ancient healing art

What is neuroanatomical acupuncture?

It's a scientific application of the ancient Chinese practice of inserting needles at strategic points on the body. It utilizes neuroanatomical science and evidence to develop treatment plans.

How does it work?

It's designed to re-educate the brain and nervous system. Its characteristic is to incorporate the latest scientific evidence for treating problems, collecting and adopting all reliable and repeatable protocols.

Who uses it?

Past United States presidents have been treated with it. The U.S. military has a version of battlefield acupuncture. Many studies yielding positive results in acupuncture use neuroanatomical techniques. A phase III multicentered trial is using it to treat the dry-mouth side effects of certain cancers.

What can it help with?

Many health problems and conditions, including chronic headaches and migraines, chronic pain, arthritis, fatigue, anxiety, depression, hormone-related symptoms, infertility, digestive problems, sleep problems, dry mouth, dry eyes and as a complementary therapy for cancer.
